## FOREWORD

British Columbia relies heavily on foreign markets, regularly exporting more than half of its total goods production. Recognition of the need for information on the volume and distribution of the Province's external trade has resulted in development of a range of foreign trade statistics and reports by this Ministry. The External Trade Report 1985 presents a selection of the latest available statistical information on British Columbia's international trading activities.

Inquiries regarding this report, or other aspects of the external trade of the Province should be directed to:

# I EXPLANATORY NOTES

# EXPLANATORY NOTES

**SOURCE OF STATISTICS:** The Statistics in this Report are primarily produced from the records of Canada Customs. Raw data from these records are processed by Statistics Canada and the British Columbia Central Statistics Bureau to produce the tables presented herein.

**LIMITATIONS OF THE AVAILABLE STATISTICS:** The available import and export statistics provide fairly extensive information on the external trade of Canada as a whole, but less information for individual provinces.

For exports produced in British Columbia, considerable information is available from the estimates of British Columbia origin exports compiled by the Ministry of Industry and Small Business Development and the statistics on British Columbia origin/lading exports produced by Statistics Canada. For imports, however, the only current statistics available are for Canadian imports passing through British Columbia customs ports. These do not differentiate between goods destined for consumption in British Columbia and those destined for trans-shipment to other provinces.

**ESTIMATED BRITISH COLUMBIA ORIGIN EXPORTS:** These special tabulations present statistics on exports grown, extracted, or manufactured in British Columbia. British Columbia origin exports can be cleared or laden for export in any part of Canada.

The primary raw data used for producing these estimates are Statistics Canada numbers for B.C. origin/lading exports as presented in the last Detailed Table in this Report. Beginning with these data, the Ministry of Industry and Small Business Development applies a variety of adjustments and revisions to arrive at the estimates of British Columbia origin exports.

These adjustments and revisions involve the following steps:

(a) elimination of products known not to be of British Columbia origin.

(b) addition to the data in cases where it is known that products of British Columbia origin have been designated for export in other parts of Canada, and therefore have not been shown as laden in British Columbia.

(c) whenever possible, revision of quantity and value figures for specific exports which originate both in British Columbia and other parts of Canada to identify only the British Columbia content.

The above adjustments are derived from information provided by various sections of the Ministry of Industry and Small Business Development, other provincial ministries, Statistics Canada, federal government departments, private and public organizations, and the business community. The Provincial Ministries of Agriculture and Energy, Mines and Petroleum Resources in particular provide valuable data. Because the estimating procedure is not uniformly reliable at the detailed commodity level, publication of the estimates is currently limited to larger commodity groups.

**B.C. ORIGIN/LADING EXPORTS:** These statistics can provide valuable information on detailed commodity by country exports that is not available in the B.C. product export estimates. They must be interpreted with care, however, because they include some exports not originating in B.C. and they exclude some exports of B.C. origin. Since these problems apply to relatively few export commodities, for most commodities the data can provide useful indicators of export volume. The major concern is commodities which are handled in bulk and warehoused in B.C. before being exported - for example, grains, oilseeds, sulphur, and various petroleum products. Although few in number, these commodities are important export items and result in the total of B.C. exports as shown in origin/lading statistics being 30% higher than total B.C. exports as estimated by the Ministry of Industry and Small Business Development.

Prior to January 1984, Revenue Canada requested exporters to note the province in which goods were laden for export, regardless of where their goods were manufactured, grown or extracted. Beginning in January 1984 a new form was introduced requesting exporters to note the province of origin (where manufactured, grown or extracted) instead of the province of lading. The old forms have not yet been completely withdrawn, however, and individual exporters are now using either the old or the new forms, depending on which they have available. Full conversion to the new form will not be completed until January 1987.

The change from lading to origin reporting introduces complications to the interpretation of these statistics. It is difficult to positively identify actual changes in export volume or value between 1984 and 1985 because some of the differences may be due to the way in which the data collection method has been revised. Estimates prepared by Industry and Small Business Development staff suggest that about 70 percent by value of British Columbia origin/lading exports were of B.C. origin.

**CANADIAN IMPORTS AND EXPORTS THROUGH B.C. CUSTOMS PORTS:** Canadian Imports and Exports passing through British Columbia customs ports provide useful measures of shipping activity and can sometimes offer reasonable indicators for British Columbia external trade in particular commodities. They may also help identify opportunities for British Columbia exports or import substitutions. Nevertheless, except for a few commodities, they do not provide direct reliable measures of either imports consumed in B.C. or exports originating in British Columbia.

**OTHER SOURCES OF INFORMATION:** Some statistics relating to particular provinces are available in Statistics Canada publications.

Annual estimates of B.C. origin exports for selected commodities are released in a publication entitled 'Financial and Economic Review' published by the Ministry of Finance. Other provincial government publications containing information on external trade are the annual 'British Columbia Industry Review' and 'Facts and Statistics' published by the Ministry of Industry and Small Business Development.

Additional statistics are available from the Central Statistics Bureau, Ministry of Industry and Small Business Development.

# II CONCEPTS AND DEFINITIONS

# CONCEPTS AND DEFINITIONS

**DOMESTIC EXPORTS:** These include both Canadian produced goods and imported goods that have been changed in form through further processing within Canada. Export statistics in this Report reflect 'domestic' exports except where otherwise indicated.

**RE-EXPORTS:** These are goods previously imported and not changed in form before leaving Canada.

**EXPORT EXCLUSIONS:** Export statistics exclude the following Non-Trade Special Transactions - settlers' effects; private donations and gifts; identifiable tourist purchases; goods to Canadian diplomatic or military personnel abroad; shipments by foreign representatives and temporary exports for exhibition or competition including films for processing. Separate statistics are maintained for these Special Transactions. Export statistics also exclude bunker supplies and stores for ships and aircraft; temporary exports (other than contractors equipment shown under commodity code 970-20) and goods in transit through Canada.

**IMPORTS:** These include goods cleared by Customs on arrival in Canada and also goods entered into customs warehouses.

**IMPORT EXCLUSIONS:** Import statistics exclude settlers' effects; private donations and gifts; goods belonging to foreign representatives or brought back by Canadians returning from foreign postings; and imports for exhibition or competition, including films. Bunker supplies, stores purchased for ships or aircraft, temporary imports or goods in transit through Canada are also excluded.

**WEIGHT:** Weight, where shown, is the net weight of the goods excluding the weight of covers or receptacles, except for certain goods as provided in the customs tariff.

**EXPORT COMMODITY CLASSIFICATION:** Export statistics are classified according to the Export Commodity Classification (XCC), which is based on the Standard Commodity Classification (SCC) as defined in Statistics Canada publication catalogue 12-502.

**IMPORT COMMODITY CLASSIFICATION:** Import statistics are classified according to the Canadian International Trade Classification (CITC) as defined in Statistics Canada publication catalogue 65-502.

**COUNTRY OF DESTINATION OF EXPORTS:** Exports are classified according to the country of farthest known destination as they leave Canada. Many primary products are shipped to entrepot points for re-export to unknown ultimate destinations.

**COUNTRY OF CONSIGNMENT OF IMPORTS:** Imports are credited to the country from which goods are consigned to Canada, except for goods originating in Central or South America but consigned to Canada from the United States. Those goods are credited to the country of actual origin, except for 'Swap Oil' from the United States.

**EXPORT VALUATION:** Exports are recorded at the values declared on export documents. These usually reflect actual selling price or, for non-arms-length transactions, the transfer price for company accounting purposes. Most exports are valued at the Canadian point (e.g. mine, factory or farm) where they are laden for export. However, a significant proportion of exports by sea or air reflect values including transportation charges to the point of export. Values for some overland shipments to the U.S. may reflect transportation charges to the ultimate destination because these cannot be identified and removed.

**IMPORT VALUATION:** Imports are generally recorded at values established for Customs duty purposes. Customs values are identical to selling prices for most arms-length transactions. However, Customs values exceed company transfer prices for most transactions between affiliated firms. Import documents are required to show values which exclude all transportation charges. Some imports from the United States are however purchased on a "delivered" basis and their prices therefore reflect an allowance for transportation costs.

**QUANTITY:** Quantity values are omitted for some items comprising a variety of different commodities (e.g. 'sound amplifiers', or 'dental supplies'). For some items the quantity is not matched exactly to the value. In the item "Engines and Parts" for example, the quantity represents the number of complete engines only, while the value represents not only the value of the specified number of complete engines, but also the value of all kinds of "Parts" of engines; therefore, in this and similar items, the average value per unit cannot be ascertained.

The total value of goods exported through British Columbia customs ports in 1985 was $19,084.3 million, up 4.6 percent from 1984. Declines in shipments of wheat, wood pulp, rapeseed, and potash were more than offset by gains in other commodities. Sulphur showed the largest advance with an increase of $449.2 million or 64 percent. The ten leading commodities were valued at $10,524.0 million compared with $10,087.3 million in 1984. A number of changes occurred in the ranking of the top ten commodities and aluminum ingot was replaced by lumber of spruce, jack pine or fir, n.e.s.

Forest products among 1985's top ten exports had a value of $3,028.6 million in 1985 compared with $2,882.2 million the previous year. Products of the mineral industry in the top ten were valued at $5,896.7 million compared with $5,019.4 million in 1984, an increase of 17.5 percent.
